1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 7, 9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al. (6,037,050). The reference discloses an ink jet recording material comprising a support and a void layer on the surface thereof containing inorganic particles and hydrophilic binder that is hardened with a cross-linking agent (see the abstract). The inorganic particles are preferably silica and may be present in quantities consistent with the instantly claimed ratios of components. The secondary particles of silica will be porous since they are a combination of the primary particles. The binder may be polyvinyl alcohol with a saponification degree of 70 to 99 mol % and a degree of polymerization of 500 to 4000. See col. 4, line 40 to col. 5, line 47. Ratio of binder to pigment is recited as 1:15 to 1:1 (col. 5, lines 50-53). The hardener may be an epoxy type hardener (see col. 6, lines 3-24). Since the silica, polyvinyl alcohol and epoxy hardener are the preferred materials, the reference is considered to anticipate applicants' claims.

2. Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Applicant's arguments with respect to claims 1, 3, 7, 9, and 12 have been considered but are moot in view of the new ground(s) of rejection.
